INTERNATIONAL APPLICATION PUBLISHED U

(51) International Patent Classification 6 :

A61F 2/06

A1

WO 9531945A1

(21) International Application Number: PCT/US95/06228

(22) International Filing Date: 18 May 1995 (18.05.95)

(30) Priority Data:  
08/246,320 19 May 1994 (19.05.94) US

(71) Applicant (for all designated States except US): SCIMED  
LIFE SYSTEMS, INC. [US/US]; One Scimed Place, Maple  
Grove, MN 55311 (US).

(72) Inventors; and

(75) Inventors/Applicants (for US only): BURMEISTER, Paul, H.  
[US/US]; 8554 Quarles Road North, Maple Grove, MN  
55311 (US). EUTENEUER, Charles, L. [US/US]; 1951  
Lander Avenue N.E., St. Michael, MN 55376 (US).  
BROWN, Brian, J. [US/US]; 178 Jandel Avenue N.E.,  
Hanover, MN 55341 (US). FORDENBAUCHER, Paul, J.  
[US/US]; 3015 James Avenue South, Minneapolis, MN  
55408 (US). VRBA, Anthony, C. [US/US]; 1266 88th Place  
North, Maple Grove, MN 55369 (US).

(74) Agents: ARRETT, Oliver, F. et al.; Vidas, Arrett & Steinkraus,  
Suite 1540, 920 Second Avenue South, Minneapolis, MN  
55402 (US).

(81) Designated States: CA, JP, US, European patent (AT, BE, CH,  
DE, DK, ES, FR, GB, GR, IE, IT, LU, MC, NL, PT, SE).

Published

With international search report.

With amended claims.

Date of publication of the amended claims:

1 February 1996 (01.02.96)

(54) Title: IMPROVED TISSUE SUPPORTING DEVICES

(57) Abstract

A new multiple component  
stent (10) which allows for initial  
self-expansion and subsequent de-  
formation to a final enlarged size.  
In one embodiment, stent (10) com-  
prises a first resilient element (12)  
and a second deformable element  
(14). In another embodiment, stent  
(30) is made of a first austenite com-  
ponent (32) and a second martensite  
component (34).

**AMENDED CLAIMS**

[received by the International Bureau on 28 December 1995 (28.12.95);  
new claims 22-30 added; remaining claims unchanged (1 page)]

deployment diameter smaller than the predetermined fabricated diameter and upon transformation of the austenite phase portion from martensite back to austenite to self-expand the stent back to the austenite phase portion predetermined fabricated diameter at temperatures in excess of the transition temperature of the austenite superelastic portion, the shape memory of the superelastic austenitic portion tending to form the austenitic portions of the stent to the fabricated diameter parent shape due to its shape memory, with the martensitic portions remaining in the deployment shape, additional recovery back toward the stent fabricated diameter parent shape can be assisted by an external force deforming the martensitic portion without slip deformation to an enlarged stent diameter beyond that of the self-expanded austenitic portion diameter, but not greater than the stent fabricated diameter parent shape.

22. The stent of claim 20 wherein the alloy is a NiTi nitinol alloy.
23. The stent of claim 22 wherein the alloy compositions is about 50Ni/50Ti atomic weight percent.
24. The stent of claim 20 wherein the alloy is a cold worked alloy.
25. The stent of claim 20 wherein the alloy is NiTi (nitinol).
26. The stent of claim 20 wherein the alloy is a prestrained alloy.
27. The stent of claim 26 wherein the alloy is NiTi (nitinol).
28. The stent of claim 20 wherein the alloy exhibits cycle amnesia.
29. The stent of claim 28 wherein the alloy is NiTi (nitinol).
30. The stent of claim 21 wherein the two phase portions comprise a single alloy.
